

1. Title and abstract

Diagnostic accuracy of test T for detecting condition C: a prospective cohort study. ^[1]

2. Methods

Data collection was planned prospectively, before either the index test or the reference standard were performed. ^[5]

Adults presenting with suspected condition C at the participating clinic were eligible. ^[6]

The index test was performed by a blinded technician using a standardised protocol. ^[10a]

The reference standard was histopathological confirmation. ^[10b]

3. Results

Figure 1 shows the flow of participants through the study. ^[19]

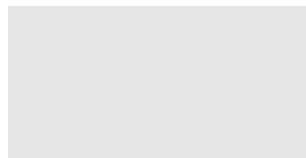

Figure 1: Participant flow diagram.

Table 1 shows baseline characteristics. ^[20]

Characteristic	Value
Age, mean (SD)	58 (14)

Table 1: Baseline characteristics.

4. Discussion

This study was limited by its single-centre design. ^[26]
