

1. Title

A randomized trial of Drug X versus placebo for Outcome Y: study protocol.

2. Administrative information

Protocol version 2.1, 15 January 2026.

3. Methods: Assignment of interventions

The randomisation sequence will be generated by an independent statistician using a computer algorithm.

Simple randomisation will be used, with no stratification.

Allocation will be concealed via a centralised, web-based randomisation system.

Participants, care providers, and outcome assessors will be blinded to group assignment.

4. Ethics

Approval will be sought from the regional research ethics committee prior to enrolment.
